

SoloBuild CRM Performance & Pipeline Optimization Analysis

Data driven insights and strategic recommendations for high-volume outbound campaigns

Organization:	SoloBuild	Report Date:	21/5/2026
Report Scope:	Whole CRM Database		
Generated By:	vishalni2004 (ORG_ADMIN)		

TOTAL LEADS 373	PIPELINE VALUE 1,000	INTERACTIONS 83	AVG DEAL VALUE 13
--------------------	-------------------------	--------------------	----------------------

1. Executive Summary

SoloBuild's CRM contains 373 leads, primarily sourced from aggregated lead-generation platforms such as 'gmap + indiamart + justdial' and 'Scraper - Bing app'. However, there is a substantial operational bottleneck at the entry stage, with 292 leads (78.3%) sitting completely unprocessed in the 'NEW' stage. Active customer engagement is limited, evidenced by only 83 total interactions that heavily lean toward raw cold calling (80 logs) and yield minimal conversions (only 3 leads categorized as CLIENT). Additionally, severe data hygiene issues are present, characterized by a nominal Total Pipeline Value of 1,000 INR, an unrealistic average deal value of approximately 2.68 INR, and a complete lack of descriptive summaries in interaction logs. Immediate structural optimization is required to automate lead qualification, standardize entry requirements, and accelerate pipeline velocity.

Key Insights & Performance Highlights

- Top-Heavy Lead Funnel: 78.3% of leads (292 out of 373) remain stuck in the 'NEW' stage, indicating an active lead qualification and assignment bottleneck.
- Critical Data Hygiene Deficit: The total pipeline value of 1,000 INR and average deal value of 2.68 INR point to missing, placeholder, or incorrect financial records across all accounts.
- Manual Log Neglect: 100% of the sample call interactions are logged with 'No summary', depriving the sales team of vital contextual history for lead nurturing.
- Sourcing Concentration Risk: Combined bulk-scraped sources of 'gmap + indiamart + justdial' (220 leads) and 'Scraper - Bing app' (105 leads) represent 87.1% of all records, demonstrating reliance on low-intent outbound lists.
- Low Conversion Efficiency: Only 3 out of 373 leads have been successfully converted to 'CLIENT' status, showing a critical conversion rate of only 0.8%.

2. CRM Funnel Distribution

Lead Stage	Leads Count	Conversion %
New Lead	292	78.3%
Contacted	47	12.6%
Chatting	18	4.8%
Meeting Set	2	0.5%
Negotiation	1	0.3%
Won Deal	0	0.0%
Client	3	0.8%
Cold Lead	0	0.0%
Not Interested	10	2.7%

AI Pipeline Analysis

The pipeline analysis reveals an inactive and poorly populated deal structure. Out of 373 total leads, the distribution includes 292 'NEW', 47 'CONTACTED', 18 'CHATTING', 2 'MEETING_SET', 1 'NEGOTIATION', 10 'NOT_INTERESTED', and only 3 'CLIENT' (won). The total pipeline value is recorded at a nominal 1,000 INR, driven by a maximum single deal value of 1,000 INR and an average of 2.68 INR. This indicates that almost all deals are being entered with zero or null values, preventing accurate forecasting and financial modeling for SoloBuild.

3. Sales Activity & SWOT Analysis

Interaction volume stands at a low 83 touches, consisting almost entirely of CALL activities (80) with minimal multi-channel follow-up via WHATSAPP (3). Despite the 80 recorded calls, the activity log exhibits an absence of valuable data, with repetitive 'No summary' entries logged by administrative or sales personnel. The outreach efforts targeted high-potential pharmaceutical brands like Sun Pharma, Torrent, and Troikaa, but these calls are not being updated with actionable notes or progression plans.

Strategic Strengths

- Strong initial lead acquisition volume from automated sourcing channels, yielding 373 total leads to feed the funnel.
- Clear targeting of established enterprise prospects in the pharmaceutical and biotech manufacturing sectors.
- Initial framework for outbound calls established with 80 logged interactions demonstrating team activity.

Areas for Improvement

- Severe operational bottlenecks leaving 78% of leads uncontacted and stagnating in the 'NEW' status.
- Poor CRM data discipline, specifically missing deal valuations and omitted call notes.
- Lack of multi-channel engagement strategies, relying strictly on phone calls with negligible digital messaging.

4. Recommended Action Plan

HIGH	Implement Automated Lead Assignment & Drip Sequences Establish automated routing rules for incoming leads and deploy automated WhatsApp or Email drip campaigns to qualify the 292 'NEW' leads, filtering high-intent prospects for direct calling.
HIGH	Enforce Mandatory CRM Validation Rules Configure the CRM to prevent saving changes to leads, progressing stages, or logging calls without mandatory inputs for deal value and structured interaction notes.
MEDIUM	Establish an Omnichannel Outreach Playbook Introduce a standardized outreach cadence combining structured CALL, WHATSAPP, and EMAIL templates to warm up raw list leads and improve the overall contact-to-meeting rate.
